Putting it All Together for the Medical Patient

From Bradys' Emergency Care 10th Edition

1. Which is NOT a decision the EMT-B must make for the medical patient?

A.) Airway
B.) CPR
C.) Breathing
D.) Circulation

2. What is an appropriate response when a patient tells the EMT-B of a disease that they have never heard of?

A.) Ask for more information on the disease and treatment
B.) Pretend that you are knowledgeable about the condition
C.) Ignore the statement completely and move away from the patient
D.) Change the subject back to something both are comfortable with

3. What should be done if a patient's condition changes from the last time you were given instruction by medical direction and you are 10 minutes from the hospital?

A.) Think on your feet and adapt
B.) Follow the original orders
C.) Contact medical direction again
D.) Stop all treatment of the patient

4. What should be done when encountering a young diabetic who has overdosed on medications and alcohol?

A.) Inject the patient with epinephrine
B.) Administer activated charcoal
C.) Give oral glucose
D.) Contact medical direction
