

# Statement – Day 2

Thanks for answering our call for help. You will be located at the surface fresh air base at the Blacken Coal #2 mine. We have lost communication with five missing miners.

There is a slope which will allow you to enter the mines. We have a blowing fan on the shaft located in the #1 entry and there is a return air shaft in the #3 entry. Both shafts will be located on the teams maps. The blowing fan is not running, but can be started by the command center attendant.

There is a pump switch located in the fresh air base. It is currently off but can be started by the command center attendant. There is no power underground. Mine maps are not up to date.

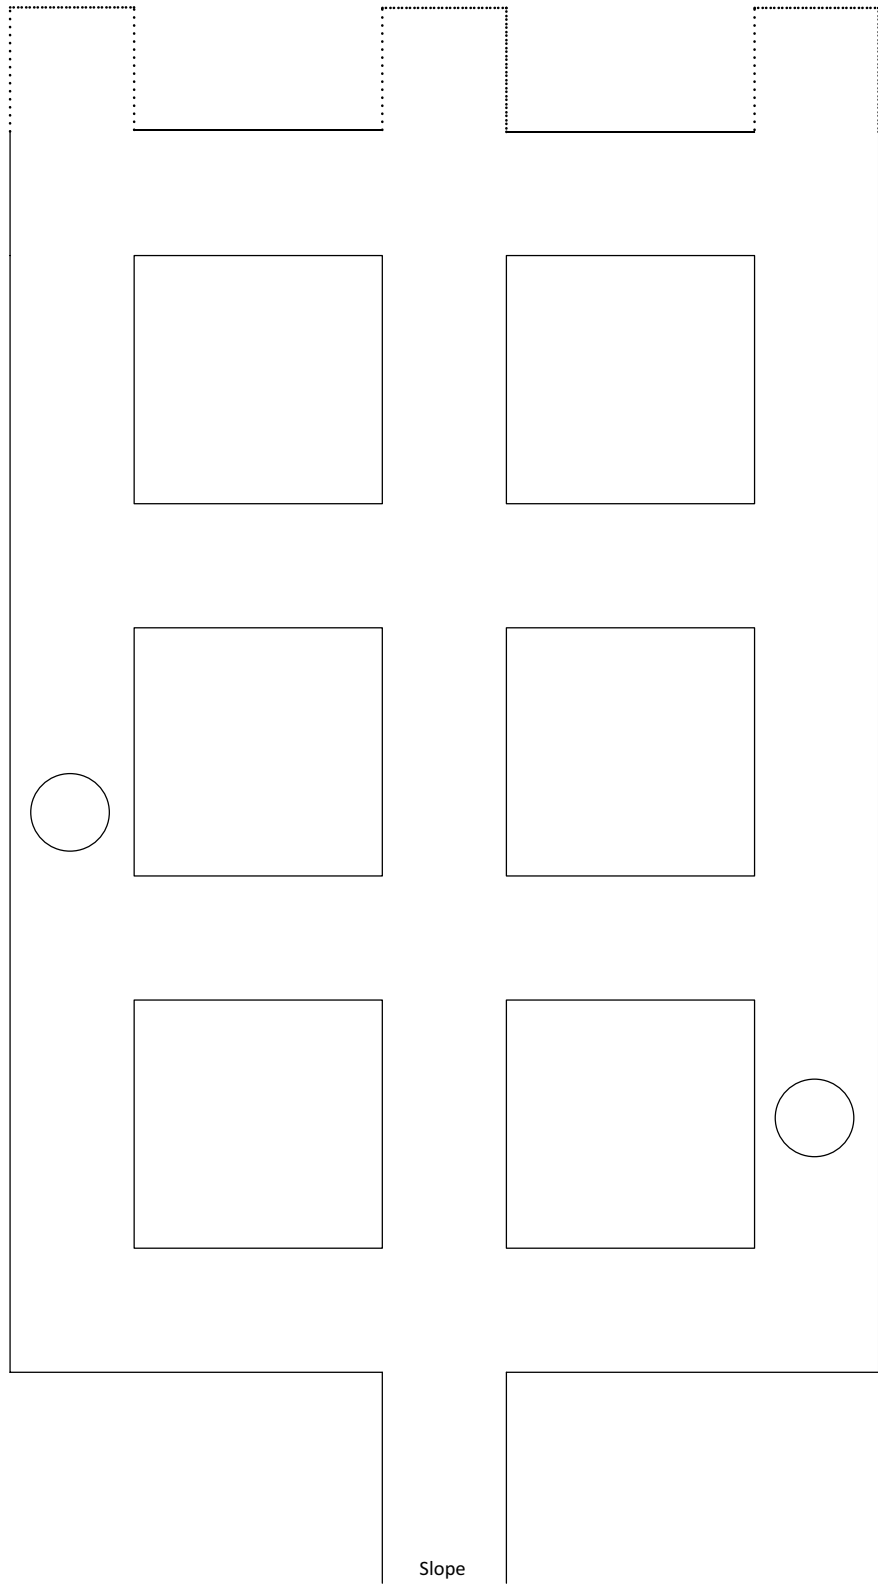

# PROBLEM

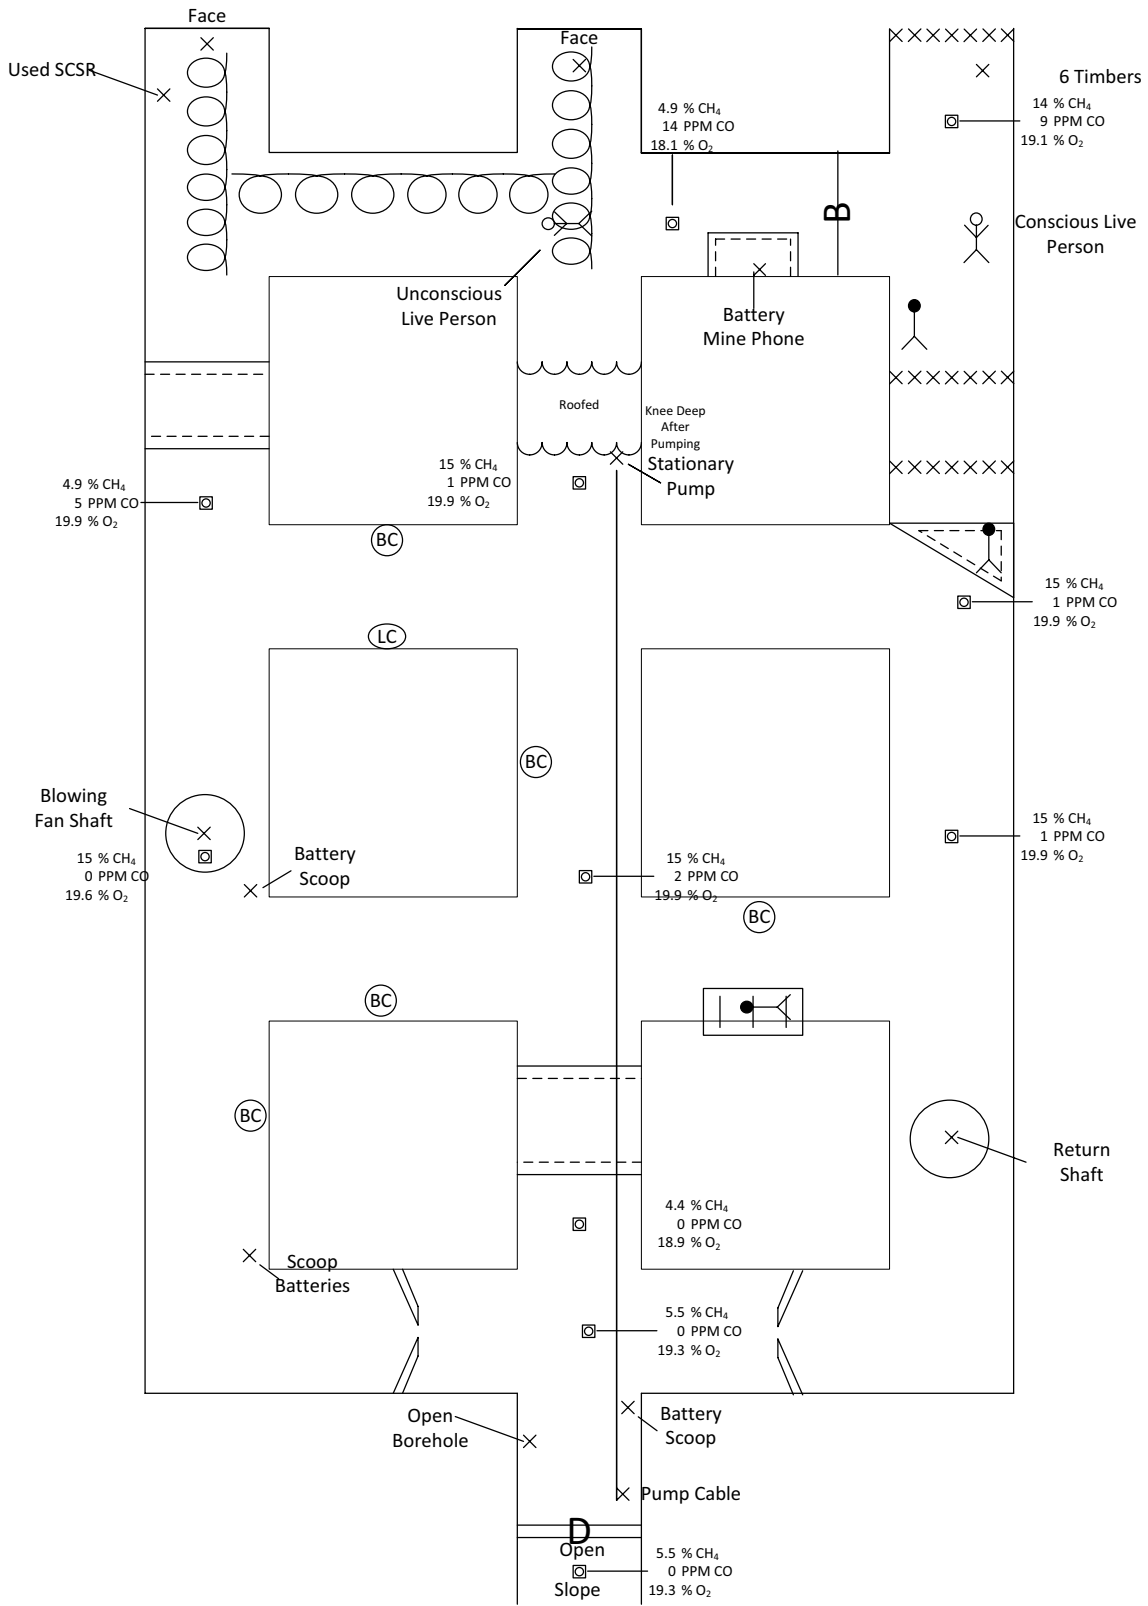

THE BLOWING FAN CANNOT BE SHUT OFF ONCE STARTED AND IT CANNOT BE STALLED OR REVERSED.
