

## **Notes for changes made on contest days below:**

Day 1, Patient in XC 2 is "conscious" – change judge's instructions and on maps.

A gas placard was added in 2 entry just outby XC 2: 4.9% - CH<sub>4</sub>, 10ppm - CO and 19.6% - O<sub>2</sub> due to discussions with a trainer prior to any team coming on to the fields to eliminate the "possibility" of this being a quitter at this point (teams exploring to the right of this intersection would find the smoke and not know the explosive ended inby the intersection). Later discussions determined the original design was proper, by rule the gas ends at the next required location to be tested (inby the plane of intersection 2 x 2) – but we added this placard to avoid this potential with Ron Burns approval.

Day 2, statement from Patient in RA is "help."
