**INTERAGENCY
MINE RESCUE CONTEST**

Day 1

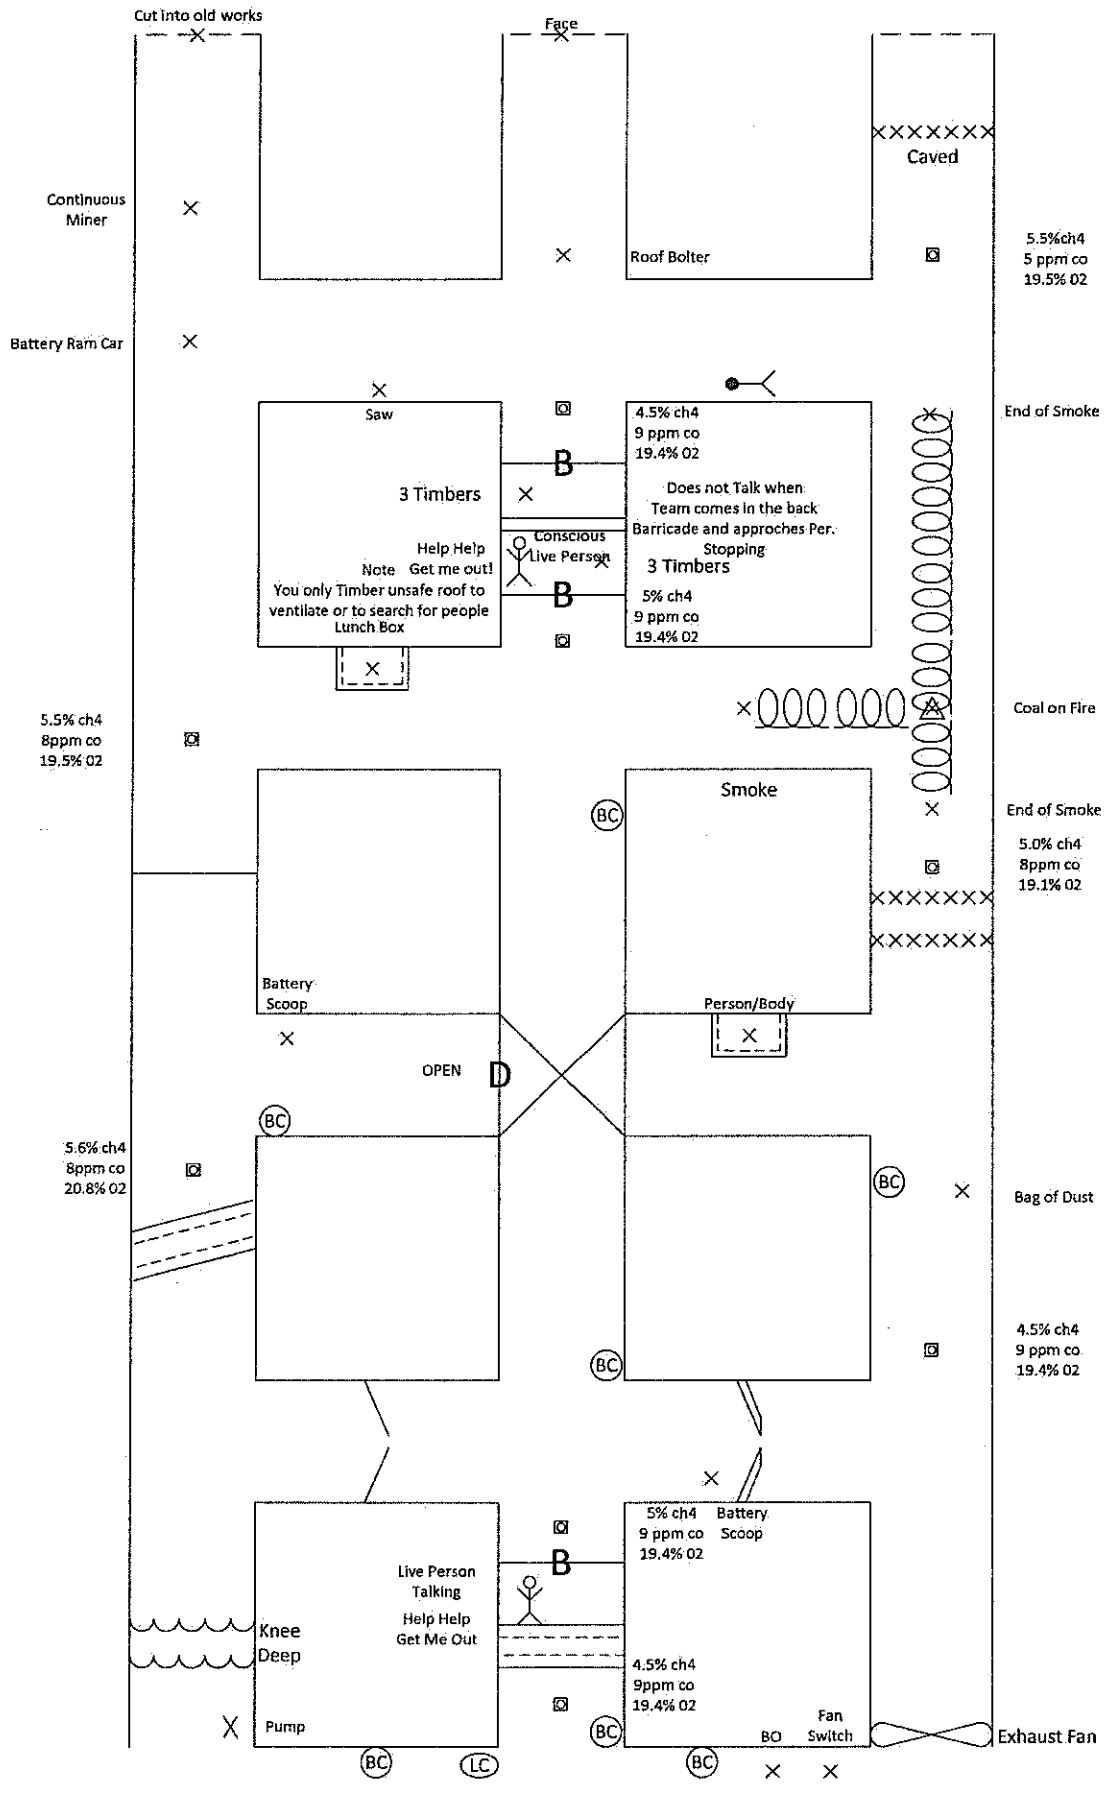

Thanks for responding to our call for help, My name is _____ The superintendent of Running Right Coal Company. Your located on the surface of our 3 entry mine. A 8 man crew entered the mine at the beginning of the evening shift to produce coal. Approximately 7:30 the section Foreman call out to the dispatcher and told him they were having some problems on the section and were going to be down for an hour or so to do some cutting and welding on the section. About 9:00PM there was a power surge and the Fan stopped running. Shortly after that 4 men of the 8 man crew exited the mine and told the dispatcher to call for help that there was a fire on the section and 4 men stayed to help try to put it out. At this point we haven't heard from the 4 men, the dispatcher has made several attempts to contact them. This is all we have for you all local agency's have been notified and are on the way. You have a back-up mine rescue team on standby.

Mine Map is not up to date.

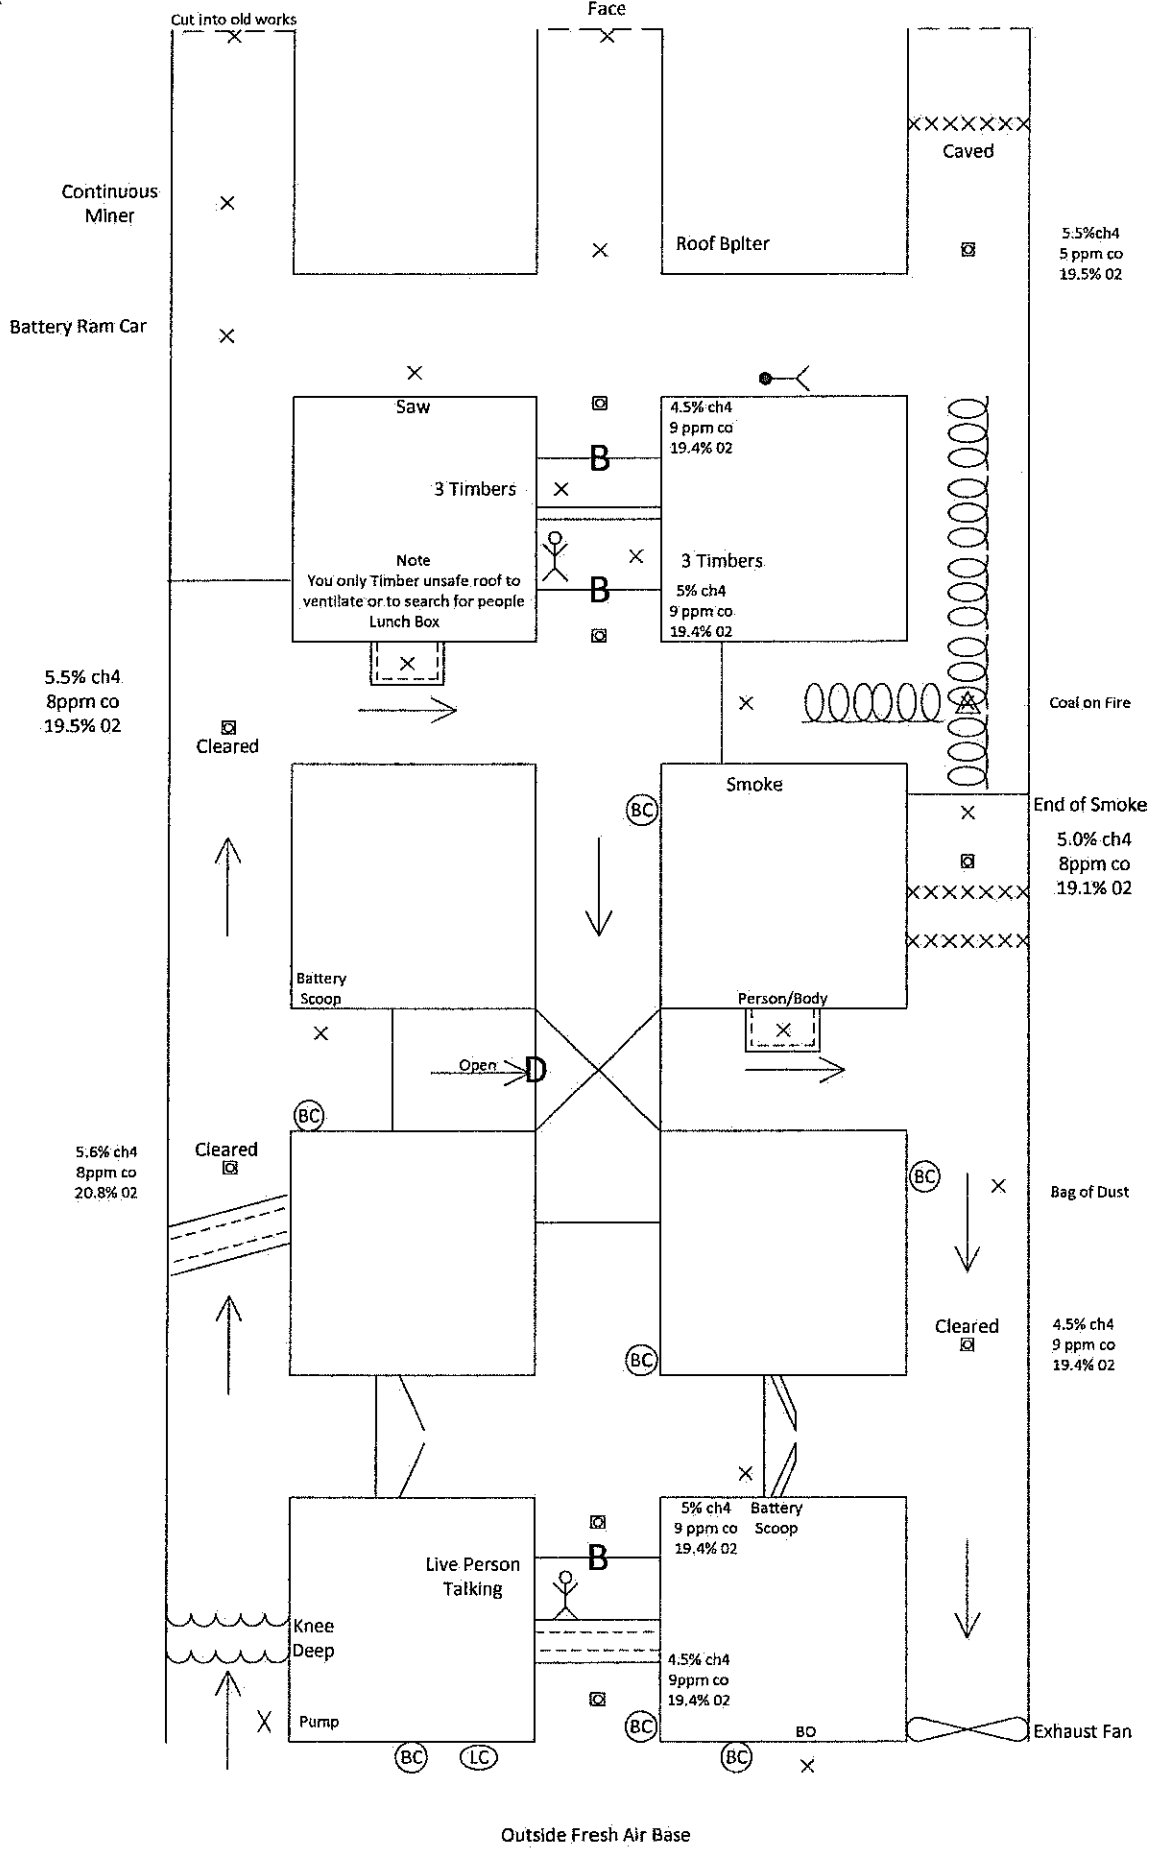

Account for all missing miners

Exhaust fan is off and can be started when needed, once started it can be stopped but not stalled or reversed.

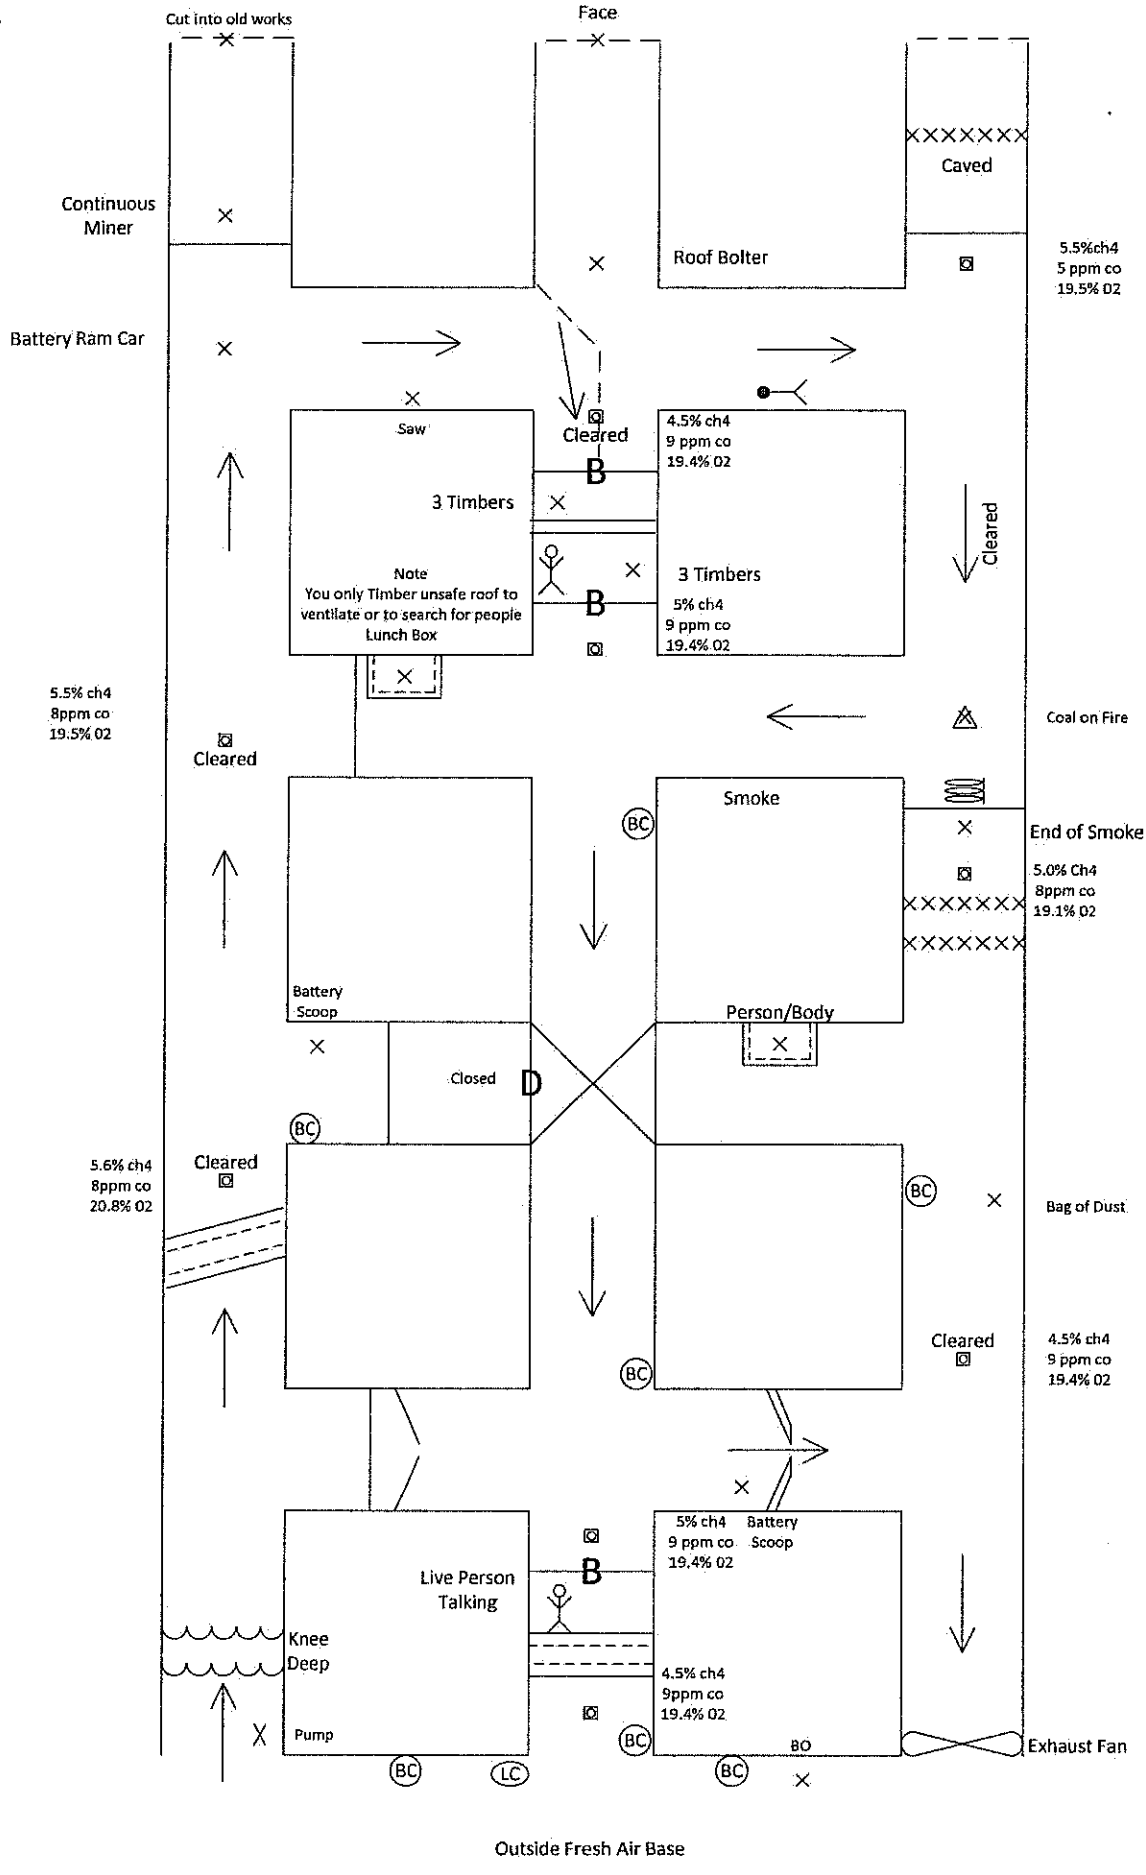

During each air pack check the low reading must be reported to the briefing officer and recorded on his map.
