## **Post 6 Day 2**

**Welcome to the Seminole 3 Mine and thank you for answering our call for help. We had a 7 person production crew go in on Day Shift to finish mining on the 7 Left section. The ERP was talking to the crew leader on the 7 Left section then lost all communications. An outby mechanic that was a few breaks outby the section reported outside that he heard a rumble from the section with a lot of dust coming down the entry. The section was having problems with water and the mechanic was going to the section to install the pump for them. The mechanic hooked up the discharge line and what power cable they had on the pump the day before but ran out of time to install it. We currently have not heard from anyone on the section. The section has had problems with methane and water in the past.**

**The mine is walking height supported with resin bolts, methane and low oxygen accumulations have been encountered.**

**We have a well- equipped and trained mine rescue team to serve as your back up while you are underground. The blowing fan is currently off, all power is off to the section, and the maps are up to date. #2 entry is the intake, #1 and #3 entries are the returns.**

**Please help find our missing miners and good luck**
