DAY 2

CONTEST

**ENERGY AND
ENVIRONMENT CABINET**

DIVISION OF MINE SAFETY

MT

2025 Harlan Co. Safety Days

Day 2

Thanks for responding to our call for help. You are located at Run Baby Run # 1 Mine in the fresh air base. We had a 5-man crew enter the mines at 4 am to clean and rock dust. When the day shift foreman arrived on the section, he was unable to contact the crew and couldn't get on the section due to roof conditions and low O₂. He then established a fresh air base. All power to the section has been disconnected. State and Federal have been notified and are on scene along with back up mine rescue teams. The exhaust fan is being monitored. We use an exhaust fan that intakes up the #1 entry and returns out the #3 entry. There is an air shaft in the face of the #3 entry that can be used if needed. That is all the information we have at this time please help find our missing miners. Thanks, and Good Luck.

2025 Harlan Co. Safety Days
Day 2 Instructions.

Explore all areas of the mine that can be done safely.

Account for all missing miners, Bring survivors to the fresh airbase.

The mine fan is exhaust fan that is running and cannot be stopped, stalled or reversed

Teams may only carry 4 sets of building material while traveling.

The mine map is not up to date.
